

The Inquiry Model

Stages	What happens.....
Tuning In	This is the stage where you define the key issue. You identify things you already know and identify the questions you need to find out about. You will hypothesis and predict what you are going to find out about. Here is a good place to set goals and timelines for yourself. What do you already know? What questions do you have?
Finding Out	Identify the primary and secondary resources you are going to need to help you find out about your issue. Your data gathering can be done in many different ways. E.g. engaging with experts, surveys, interviews, film, experiments, observations, field work. What would you like to learn more about and where can you find it out?
Sorting Out & Making Connections	You will now combine all the different things you have learned and start to make connections. You will organise, analyse and communicate the information you have gathered using a range of different learning areas. What meaning can you make from this?
Going Further	Revisit your original questions where you investigated areas of personal interest and present another perspective on the issue. What would you like to learn more about and why? How is this linked to your issue?
Reflection	Thinking about the unit! Here you can make connections and draw conclusions about what you have learned. (You should be reflecting all the way through!) What, how and why your learning has come about? What did you learn about this unit? What did you learn about yourself self? What should I do now?
Taking Action	Here is where you say SO WHAT? Now you have all this new knowledge how can you apply this the real world. What do you want to do as a result of your learning?

Tuning In
We see
We wonder

Finding Out
We explore
We investigate

Sorting Out
We discover
We make connections

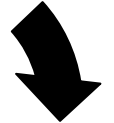

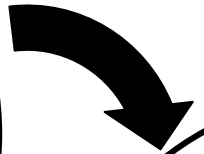

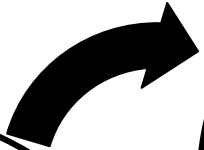

Going Further
We share our thinking

Making Conclusions
We reflect

Taking Action
We act
We change
